

MOVING DIRT

Detergents, cleaning agents and disinfectants are used to remove dirt and germs from our homes, workplaces and institutions. On average, each EU citizen uses 10kg of laundry and dishwashing detergents per year. Once used, the wastewater containing all these chemicals has to be managed. Several new labels have been introduced to make it easier for you to choose the right product, use it safely and obtain the best possible results. Learn the detergent symbols, follow the directions for use, and only use them in recommended amounts.
